

* Multithreading

WAP which creates 2 threads, one thread displaying 'BMSCE' one every 10 seconds and another displaying 'CSE' one every 2 seconds.

```
class BMSCE extends Thread
```

```
{
    public void run()
    {
        for (int i=1; i<=2; i++)
        {
            SOP ("BMSCE " + i);
            try
            {
                Thread.sleep (10*1000);
            }
            catch (InterruptedException e)
            {
            }
        }
    }
}
```

```
class CSE extends Thread
```

```
{
    public void run()
    {
        for (int i=1; i<=10; i++)
        {
            SOP ("CSE " + i);
            try
            {
                Thread.sleep (2*1000);
            }
        }
    }
}
```

catch (InterruptedException e)

```
{
    {
    }
}
}
```

~~try~~

public class Main

```
{
```

PSVM

```
{
```

SOPC "USN : IBM23C8034 \n name : Ananyci"

BMSCE b1 = new BMSCE();

b1.start();

CSE u = new CSE();

u.start();

```
}
}
```
